

Refer to Whittaker's *How to Break Software* and test Open Office 2.0 Writer (latest build) with his attacks.

Conduct 2 each of

- Input attacks
- Output attacks
- Data attacks
- Computation attacks
- Media attacks
- File attacks

You are welcome to work in pairs or triples. If you work in pairs, submit 2 of each type of attack. If you work as a triple, submit 3 of each type of attack.

For each attack:

- Describe your test
- Explain why this test is a good example of this type of attack (*Not what makes it a good test. What makes it a good media attack, rather than a good file attack*).
- If you find a bug, tell me the bug number.

This assignment is due in 2 weeks, March 30, at 9 AM (morning, BEFORE CLASS).
